

Hello! I'm Zakharenko Valerij

I'm really into programming, especially when it comes to web development. I'm mostly a back-end developer, but I also know my way around the front-end. I care a lot about writing clean, organized code. I'm a quick learner and love working with a team to get things done. I'm also interested in getting started with mentoring newbies or helping out with interviews, even though I haven't done it yet. My dream is to work on a project that combines my two biggest passions: tech and music.

Main stack: **ASP.NET Core web app with docker support**
Place: **Warsaw, Poland**
Contract type: **B2B**
Languages: **English - B1, Russian - native**
Methodologies: **Agile, Scrum**
Work passion: **Refactoring, code review, technically challenging tasks, setting up cryptography**
Age: **26**
Working: **5 years 7 months**
Status: **Looking for a new job**

My services

As a programmer, I offer high quality website development services in any field, as a solo programmer or in a team.

Back-end
development

Front-end
development

Any other
development

Code review

My technologies

C#

ASP.NET Core

EF Core

Also I have some experience with

Docker

JavaScript

Node.js

Vue.js

React.js

SQL

PostgreSQL

MySQL

MongoDB

RabbitMQ

bash

PowerShell

Grafana

My experience

Fullstack developer

Centaurea (1 year 11 months)

I contributed to the development of three web applications: a company website, a real estate platform, and a web dashboard for an IoT system. I worked closely with an English-speaking client, handling communication through emails and chats. One project was built as an ASP.NET Core web API with a React.js SPA front-end, while the other two were monolithic ASP.NET Core applications using Razor Pages and a Vue.js front-end.

Back-end developer

VEB Technologies (2 years 7 months)

The main project I worked on was a B2B web application for a bank. My role involved developing a microservice web API using ASP.NET Core with Docker support, all within an agile-like work environment. I also served as the primary code reviewer for this project. Additionally, I independently developed and delivered an API for a smaller project on Express.js, completing it ahead of the deadline.

Fullstack developer

Luxoft (2 months)

Initially hired as a back-end developer, I transitioned to front-end development to meet the project's needs, as there were no other front-end developers available. The project, developed from scratch, involved building microservices on .NET and a React-based front-end. Working within a small team, I took on the role of code reviewer and maintained regular communication with the client in English.

Back-end developer

Betcore (11 months)

In a product-focused company, I worked on a large, legacy project that required significant refactoring and dealing with legacy code. My role was entirely back-end, focusing on .NET microservices. We followed Scrum practices as closely as possible, with a dedicated Scrum Master guiding us on the correct practices. At one point, we experimented with a Kanban approach, where instead of each person handling their own task, we would work together as a team on a single task. I also maintained close collaboration with other teams throughout the project.
