

Hello there! I'm Valerij Zakharenko

I'm really into programming, especially web development. I'm mostly a back-end developer, but I also enjoy working on front-end tasks when needed. I care a lot about writing clean, organized, and future-proof code. I'm a quick learner, and I love working with a team to get things done.

In the future, I see myself growing into a Tech Lead role — the kind of person who keeps an eye on the bigger picture: making sure the project doesn't just work today but is ready for tomorrow too. I want to help balance business goals with technical tasks like refactoring and scaling, and I'm all about explaining to managers why tech debt matters and to developers why good work doesn't mean overengineering.

Oh, and if there's a chance to combine my love for tech and music in one project, that'd be the dream.

Main stack: **ASP.NET Core web app with docker support**
Place: **Warsaw, Poland**
Contract type: **B2B**
English: **B2**
Methodologies: **Agile, Scrum**
Age: **27**
Working: **6 years 1 month**
Position: **Senior back-end developer**
Status: **Looking for a new job**

My services

I'm here to help you build awesome websites, whether you need someone to go solo or be part of a team.

My tech stack

C#

ASP.NET Core

EF Core

I've had a chance to work with

Docker

JavaScript

Node.js

Vue.js

React.js

SQL

PostgreSQL

MySQL

MongoDB

RabbitMQ

bash

PowerShell

Grafana

My experience

Back-end developer

Exadel (Feb 2025 - Present)

Contributing to the development and maintenance of a distributed microservices-based system. Involved in implementing business logic, improving service integrations, and enhancing existing solutions. Collaborating closely with the team to drive architectural improvements, scalability, and system reliability.

Back-end developer

Betcore (Sept 2023 - Nov 2024)

In a product-focused company, I worked on a large, legacy project that required significant refactoring and dealing with legacy code. My role was entirely back-end, focusing on .NET microservices. We followed Scrum practices as closely as possible, with a dedicated Scrum Master guiding us on the correct practices. At one point, we experimented with a Kanban approach, where instead of each person handling their own task, we would work together as a team on a single task. I also maintained close collaboration with other teams throughout the project.
